Eisenhower Matrix: Workout Tracker

Q1: Urgent and Important (Do First, MVP 1)

- WorkoutEntry class (exercise, sets, reps, weight, date)
- CLI menu loop
- Log a new entry
- Save entries to a file
- Load entries on startup
- View all history

Q2: Not Urgent but Important (Schedule, MVP 2 and 3)

- Input validation (no negative weights, bad numbers)
- Personal record per exercise
- Weekly total volume
- Filter history by exercise or date
- Edit and delete entries
- Basic unit tests
- Design doc and README

Q3: Urgent but Not Important (Minimize)

- Polishing menu text and spacing
- Perfecting the file format
- Refactoring early code
- README screenshots

Q4: Not Urgent and Not Important (Drop for Now)

- GUI (Swing or JavaFX)
- Charts and graphs
- Cloud sync or user accounts
- Workout templates or timers
